Manual Video Editing is Slow, Expensive & Ignores Local Languages

Current workflow bottlenecks for regional talking-head creators and educators

Slow & Expensive Manual Process

Talking-head creators and educators spend hours cleaning messy takes filled with pauses and fillers. Hiring help is costly, with Malayalam short-form editors earning ₹3–5 lakh annually.

Existing AI Tools Fail Regional Needs

Meanwhile, global AI editors are English-first, CapCut is banned in India, and code-mixed Manglish breaks existing caption tools.

₹3–5 Lakh

Annual cost for Malayalam short-form editors

Initial Focus Market

Solving for Regional Creators

Our initial focus is solving this for Malayalam and Manglish creators, educators, and local businesses.

Automated, Localized Editing via Video-as-Code

Core Insight

"Video-as-Code"

The AI never directly touches pixels.

Instead, it reads transcripts and generates a lightweight **JSON edit plan** for cuts and graphics.

Final rendering is executed cleanly and cheaply via **FFmpeg**.

Market & Tech Drivers

Why Now?

Speech-to-Text Progress

Modern STT models accurately capture complex, code-mixed speech across diverse regional dialects.

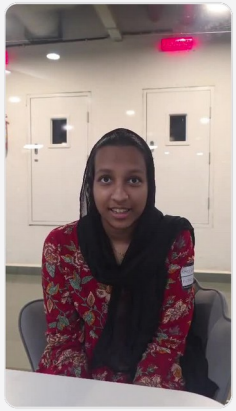

Advanced LLMs

Current models reliably output structured execution plans in a single, fast API call.

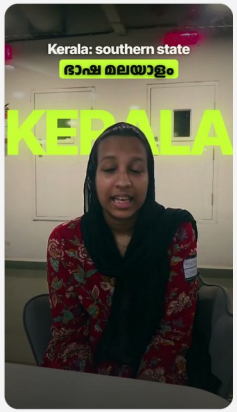

Rapid Indian Creator Growth

As local creator ecosystems explode, our code-driven tools directly bridge the existing technology gap.

MALAYALAM STATEMENT

From Raw Clip to Reel-Ready in Minutes

Real frames from our MVP: raw take to finished reel.

STEP 01

Upload Clip

Upload raw video and select caption language.

STEP 02

AI Edit Plan

Cuts pauses, fixes captions & adds graphics (Malayalam summary).

STEP 03

Polished Reel

Optimized 9:16 video with IG-ready loudness.

TEST RESULTS & PERFORMANCE METRICS

27.1s

Tightened Duration
Down from 34.1s (8 pauses removed)

~10s

Transcription Time

~6K

Tokens / Reel
One Claude call; retries reuse it

A Deterministic Pipeline Powered by a Single AI Call

One Claude AI decision engine structures the edit plan; deterministic services handle execution.

STAGE 01	STAGE 02	STAGE 03	STAGE 04 (AI)	STAGE 05
Normalize	**Transcribe**	**Word Align**	**Claude Plan**	**Render**
INTAKE **FFmpeg** Initial video & audio normalization and format standardisation.	STT ENGINES **Speech-to-Text** • OpenAI **gpt-4o-transcribe** • Offline **faster-whisper** (Malayalam)	TIMING **Custom Aligner** Generates precise word-level timestamping for accurate edit points.	SINGLE AI CALL **Claude AI** Generates a **strict JSON edit plan** in one single pass. Guarantees downstream determinism.	OUTPUT **FFmpeg Render** • HTML overlay graphics templates • Synthesized sound effects (SFX)

SYSTEM BACKEND: Fully orchestrated and managed via a high-performance **Python / FastAPI** service layer.

Monetizing Time Saved for Creators and Institutes

Value Proposition & Savings

₹3–5L / yr

Replacing Traditional Video Editors

Transforms hours of tedious editing into minutes of effortless review, at a fraction of an editor’s salary.

Go-To-Market Strategy

"Done-for-You" Kerala Seeding

Begins with high-touch "done-for-you" editing for Kerala creators to establish product value and build strong local proof points.

Community Word-of-Mouth

Leverages close creator networks and organic advocate referral channels for expansion.

Monetization Model

- **Freemium Model for Creators**

Free monthly minutes, then a paid creator plan priced for India.

- **Scaled Team Plans**

Tailored recurring plans engineered for educators, institutes, and agencies.

Differentiation vs Submagic & Cardboard

- **Native Manglish Processing**

Seamlessly handles Manglish natively, breaking away from English-first constraints.

- **Closed-Loop Analytics (Roadmap)**

Will feed audience retention data back into future edits.

Evolving from an Editor to an AI Growth Partner

Product Roadmap

NOW — **Talking-Head Reels MVP**
Working MVP today for Malayalam/Manglish talking-head content.

NEXT — **Retention-Driven Editing**
Use analytics drop-off points to fix future cuts.

THEN — **AI Growth Coach**
Compare stats with top niche creators; explain gaps in the creator's language.

LATER — **Regional Expansion**
Hindi and Tamil next (transcription prompts already written).

Risk & Mitigation Matrix

Risk Factor	Mitigation Strategy
Transcription Errors Vernacular speech & accent gaps	**Offline Models + Human Review** Offline local models as fallback with AI caption fixes & human verification.
Render Speed ~15 min per short clip on CPU	**Dedicated GPU Hosting** GPU hosting, plus fast draft renders for quick review.
Cloud Cost Scaling compute overhead	**Hybrid Local Fallback** Utilizing local models for transcription tasks to reduce API dependence.
Platform Limits Instagram API gives averages only	**Screenshot Reading First** Read the in-app retention graph; add APIs as access allows.
